

OneHealthPort HIE – Prescription Monitoring Program Medication History

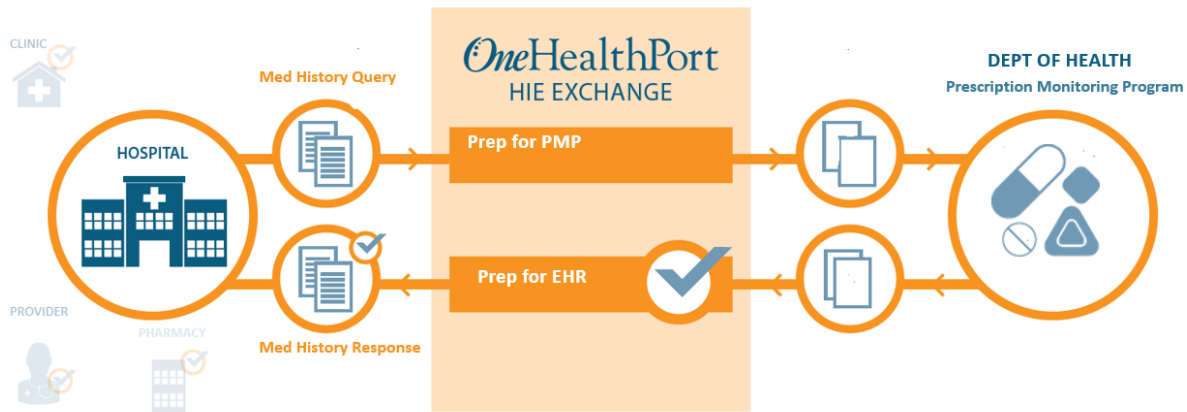

Simplify and Automate the Population of Your EHR with Medication History Data from PMP

Improve patient safety and patient care by getting a more complete drug history for your patients, and information about any narcotic use, at the point of care. Through the OneHealthPort HIE you can access Washington State Prescription Monitoring Program (PMP) medication history information and integrate the data into your electronic health record (EHR) without having to use a separate web portal, manually input your information or disrupt your normal workflow.

This transaction is available to all contracted HIE clinical trading partners without additional cost.

KEY BENEFITS

- Improves patient safety and patient care
- Qualifies for Meaningful Use Stage 2 as an “other registry” transaction
- Uses the NCPDP medication history query which is a feature of every certified EHR
- Automates how providers obtain information from the PMP repository
- Provides more complete drug history information about narcotic use at the point of care
- Provides information to help identify potential drug-seeking behavior
- No interruption of workflow
- No additional system log-on is required

HOW IT WORKS

The PMP transaction uses a standard format already available in every certified EHR system to transfer patient medication data from the PMP directly into your EHR where it is stored in the patient's medication history.

The PMP Transaction:

- Allows integration of the information from the PMP directly into the medication history of a patient record in a certified EHR
- Uses a standard medication history query to check for PMP history
- Uses a secure connection between your EHR and the PMP through the OneHealthPort HIE to relay the request for information and the response
- Works within your EHR, which manages the workflow and how often the PMP is checked for new information during e- Prescribing, medication reconciliation or refill request management

GETTING STARTED

Already a OneHealthPort HIE participant:

Organizations need to complete the Washington State Department of Health's onboarding process to start using the PMP. Details can be found by visiting the Controlled Substances Registry on the Washington State Department of Health website at www.doh.wa.gov.

Not yet a OneHealthPort HIE participant:

To start, organizations need to join the OneHealthPort HIE. Learn how to get started with the HIE at www.onehealthport.com/HIE.
