# 1 Overview

---

The OneHealthPort Health Information Exchange (HIE) Web Services Implementation guide provides information for organizations that have the tools and resources to set up and manage web services using public key infrastructure certificate exchange for data submissions and queries.

## 1.1 Purpose

The purpose of this document is to provide the certificate requirements, end point connectivity information and additional transaction-based information for organizations' use in preparing for and implementing web services with the OneHealthPort HIE.

## 1.2 Intended Audience

This document is intended for:

- New trading partners requiring information about OneHealthPort web services.
- Parties responsible for implementing and managing certificate-based connectivity to the OneHealthPort HIE.

# 2 Certificate Requirements for HIE Web Services

---

The OneHealthPort HIE web services use the open internet to allow maximum bandwidth for message exchange. Certificates are used to sign and encrypt the messages using full Public Key Infrastructure (PKI) sent via a secured channel (https). Multiple web service transactions can be traded with a single certificate exchange.

Organizations choosing web services **are required to provide certificates to the OneHealthPort HIE**. Only certificates from a third-party certificate authority are accepted for use. The same CA issued certificate may be use with both the production and UAT (test) environments.

### Certificate requirements:

- Certificates supplied must be from a commercial certificate authority – self-signed certificates will not be accepted
- The same certificate may be used with the production and UAT (test) environments
- 2048-bit SSL Secure Sockets Layer with TLS Encryption

- 256 bit encryption
- SHA-2
- Standard or Basic SSL certificate for a single Domain name (Wildcard or multi-domain is not required unless that is your organization's standard)
- Validity option: 1-3 years
- Preferred format - A digital certificate will be required for secure exchange of data. This may be in the form of either a DER encoded binary X.509 (.cer) or Cryptographic Message Syntax Standard PKCS #7 (.p7b, .p7c). If a .p7b/.p7c file is going to be used please export the entire certificate chain for use during the connectivity process
- Provide full certificate chain from a third-party certificate authority PLUS the public key.

## 2.1 Certificate Handling

The certificate generated for trading partner connectivity to the HIE is unique for each partner. The trust relationship is created between each partner and the OneHealthPort HIE through execution of the HIE Participation Agreement.

Each trading partner will only require the certificate of the OneHealthPort HIE to trade with the entire OneHealthPort HIE trading community. The OneHealthPort HIE is designed as a spoke and hub model with a single connection from each participant (trading partner) to the HIE (Hub). Data will flow from the sending party to the HIE and then outbound to the designated receiving party.

All the transactions to OneHealthPort HIE will be done using certificate based Mutual Authentication. Trading Partner and OneHealthPort HIE will need to exchange certificates prior to establishing the secure connection.

From a high-level point of view, the process of authenticating and establishing an encrypted channel using certificate-based mutual authentication involves the following steps:

1. A client requests access to a protected resource/Service.
2. The server presents its certificate to the client.
3. The client verifies the server's certificate.
4. If successful, the client sends its certificate to the server.
5. The server verifies the client's credentials.
6. If successful, the server grants access to the protected resource requested by the client.

### 3 Endpoints for Web Service Transactions

---

WSDLs and endpoint URLs are provided by the OneHealthPort Clinical Data Repository (CDR) for use by the organization when implementing web services to the CDR. The only accepted method for WSDL retrieval is a "GET" Any "POST" requests to WSDLs will fail.

#### OneHealthPort HIE UAT (test) Environment:

1. ITI-41 WSDL – URL link for the ITI-41 WSDL <https://uat-onehealthport-api.axwaycloud.com/wsd/ITI41?wsdl>
  - a. Endpoint - <https://uat-onehealthport-api.axwaycloud.com:8098/webservice/ITI41>
2. ITI-47 WSDL – URL link for the ITI-47 WSDL <https://uat-onehealthport-api.axwaycloud.com/wsd/ITI47?wsdl>
  - a. Endpoint – <https://uat-onehealthport-api.axwaycloud.com:8098/webservice/ITI417>
3. ITI-18 WSDL – URL link for the ITI-18 WSDL <https://uat-onehealthport-api.axwaycloud.com/wsd/ITI18?wsdl>
  - a. Endpoint - <https://uat-onehealthport-api.axwaycloud.com:8098/webservice/ITI18>

### 4 Signature

---

OneHealthPort will configure web services with trading partner signature as optional. If trading partners are able to provide signatures in their messages, trading partners:

- must use their own private key to sign the message
- should include the public key in the messages
- should sign the body part of the message

The signature information should come in a predefined structure defined by the tag `<wsse:Security></wsse:Security>` included in the header of the message.

An example of the `<wsse:Security></wsse:Security>` element follows :

```
<wsse:Security xmlns:wsse="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-secext-1.0.xsd">
  <dsig:Signature xmlns:dsig="http://www.w3.org/2000/09/xmldsig#" Id="Id-0001481043049804-ffffffffde8692da-1">

This 'wsse' structure can be generated manually using free tools (i.e. SoapUI, APITester).

## 5 Web Service Transactions

Currently OneHealthPort supports the following web service transactions shown below.

### 5.1 ITI-41 Provide and Register

Transaction used to push documents to a document registry. Currently the **CDR format required is SIMPLE SOAP with an embedded CCD that is base64 encoded**. Multipart messages (MTOM) will fail to process at the CDR.

## 5.2 ITI-47 Patient Demographics Query (PDQ)

Transaction which queries for a list of patients and patient identifiers across systems using known demographic data.

## 5.3 ITI-18 Registry Stored Query

Transaction which queries to find documents and document identifiers that meet the specified query criteria. It will return a list of document entries found to meet the criteria.

## 5.4 Message Responses

Web services transaction submissions will receive message responses, indicating a successful transmission or an error condition. Samples of message responses are shown in the Appendix.

# 6 HIE and CDR Operations Change Management

---

Organizations will need to incorporate management of HIE and CDR connectivity and data submission activity monitoring into existing system management and operational change management processes. In addition to daily activities, processes and resources will also need to be organized to support monthly HIE and CDR maintenance activities and unplanned outages. The information listed below can be used for HIE and CDR operations planning.

## 6.1 OneHealthPort HIE and CDR System Availability Notifications

The OneHealthPort HIE and CDR web pages post system availability in the Twitter “*Tweets*” notification box shown below. Current system status is posted and updates are provided via Twitter feeds. Operations teams can sign up to follow Twitter feeds announcing system events using Tweets by @ohphie.

Unplanned outages are posted on the OneHealthPort HIE and CDR web pages, as well as upcoming scheduled maintenance downtimes. Monthly maintenance schedules are also posted annually for use in operational planning. See the [OneHealthPort HIE](#) and [OneHealthPort CDR Maintenance Schedule](#) section on the web pages for more information. In addition to web page postings, detailed system announcements and notifications are sent via email distribution.

The screenshot shows the OneHealthPort HIE website interface. At the top, there is a navigation bar with links: HOME, SINGLE SIGN-ON, HIE, CDR, CREDENTIALING, ADMINIMP, and ABOUT US. Below this is the OneHealthPort HIE logo. A secondary navigation bar contains: HIE Home, Contracting, Registration, Transactions, Application Portal, Participants, Support, and About. The main content area is divided into several sections:

- Contracting:** The Health Information Exchange (HIE) supports the exchange of clinical or business information in standardized message formats. To participate, interested organizations must sign a participation agreement and pay an annual subscription fee.
- Registration:** Organizations contracted with the OneHealthPort HIE must register facilities before exchanging information.
- Transactions:** The HIE supports standard transactions such as C-CDA documents, Electronic Laboratory Reporting and Syndromic Surveillance messages to the Department of Health, and system-to-system query capability to the Prescription Monitoring Program database.
- Application Portal:** HIE web applications offer OneHealthPort HIE participants access to tools for using HIE services through a secure website portal. Applications include the Clinical Data Repository, the OneHealthPort Provider Directory, and C-CDA Validation Testing.
- Maintenance Schedule:** Production maintenance is scheduled monthly for up to a 4-hour outage starting at 5 PM Pacific. Next scheduled outage is Friday, January 20, 2017. UAT maintenance is scheduled for a 5-hour outage the first Thursday of each month starting on Wednesday at 11 PM and ending Thursday 4 AM Pacific.

There is also a "Tweets by @ohphie" widget showing two tweets about production maintenance completion and a system outage. At the bottom, there is a footer with copyright information: © 2016 OneHealthPort, Seattle, WA, USA. All rights reserved. and a "Contact Us" link.

## 6.2 OneHealthPort HIE and CDR Support Request Form

Use this form to obtain technical support or assistance with issues related to information exchange activities with the OneHealthPort HIE or the CDR. The support request form is located on the OneHealthPort HIE and CDR web pages and the link is also provided below. The form is monitored by HIE and CDR technical consultants and business team members to ensure proper resources are quickly deployed to respond to customer issues.
